

CORNING

Coexistence Elements

Solutions Guide

PON Evolution for Existing ODNs

Today, communication service providers (CSPs) are evolving their FTTH networks from GPON (2.5 Gbps) to 10 Gbps and higher. This PON (passive optical network) evolution includes higher bandwidth services such as XGS-PON (10 Gbps symmetrical), NGPON2 (multiwavelength TWDM 10 Gbps to 40 Gbps), 25GS-PON (25 Gbps symmetrical), and even 50G-PON.

Leveraging investments in GPON services continues to have value for most residential subscribers. However, when using the same FTTH ODN (optical distribution network) for enterprise level services (small and medium businesses) or even mobile x-haul, 10G+ services are desired as well. CSPs have options for how to introduce and operate multiple generations of PON on an existing ODN infrastructure. The network provider could keep the PON technologies separate on dedicated feeder fibers and splitters. The appropriate splitter outputs would then be directed to the respective subscriber based on their subscribed bandwidth (i.e., GPON vs XGS-PON).

In order to preserve existing feeder fibers, the concept of coexistence is utilized. Coexistence is the ability to have two or more services transported together on the same fiber. This is made possible by using wavelength division multiplexing (WDM) technologies (filters) to overlay the different wavelengths of the multiple services. WDM devices that overlay PON services are referred to as Coexistence Elements (CEX).

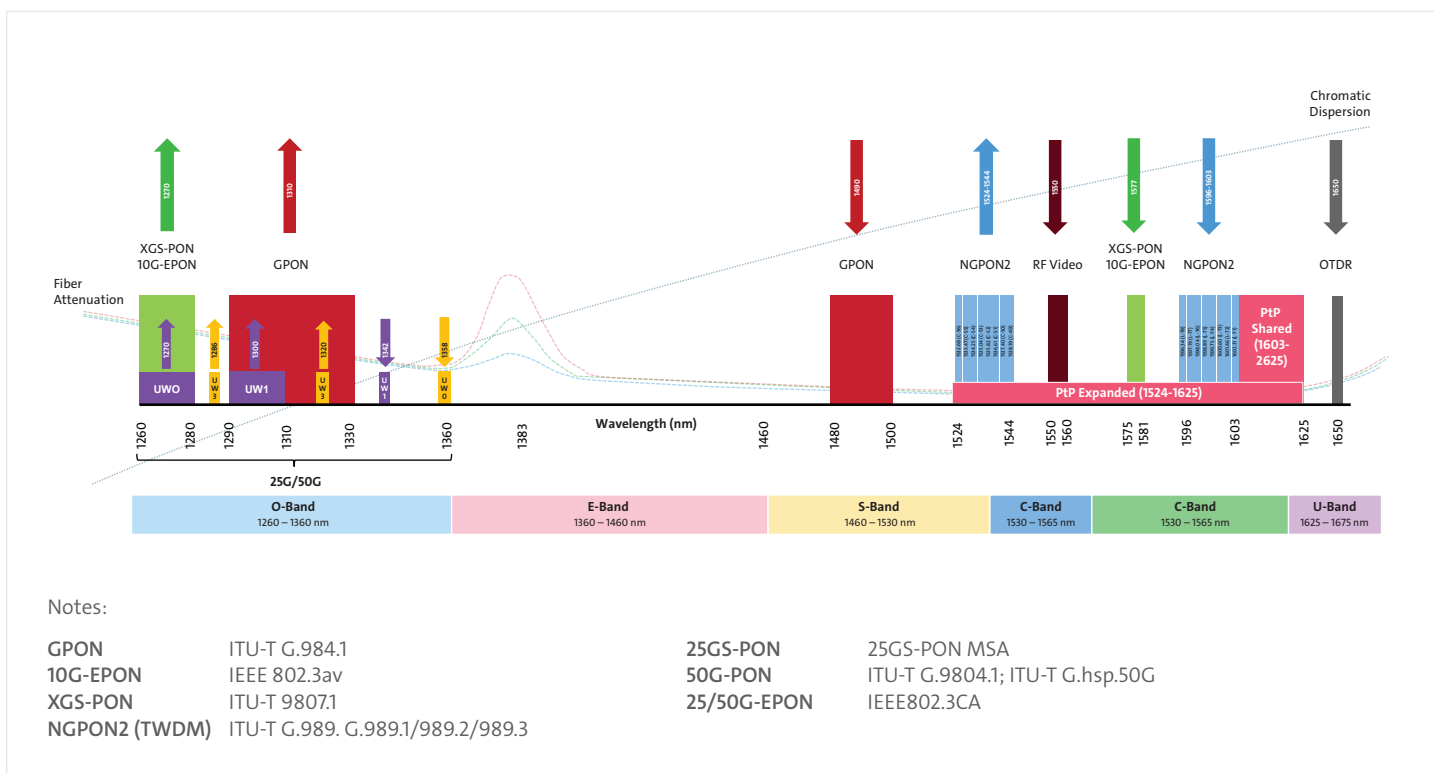

Corning Optical Communications has integrated our micro-optics devices into various industry recognized hardware platforms, such as Centrix™, Eclipse®, and LGX.

Corning's CEX portfolio has solutions from basic coexistence scenarios to complex network convergence architectures.

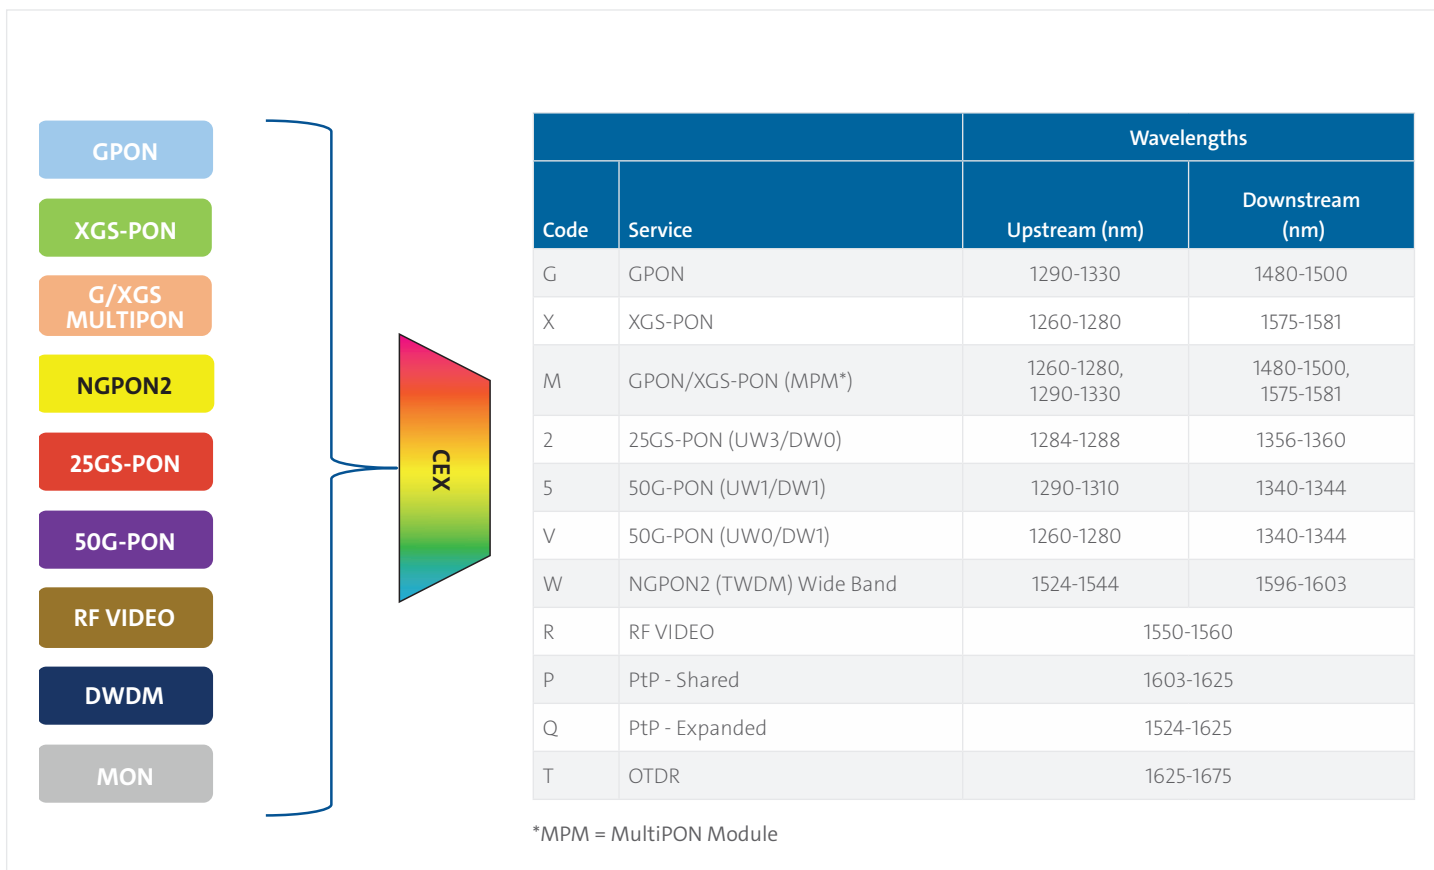

PON Coexistence – Example

Understanding Spectrum for Coexistence and Convergence

Service Options

Ordering Information | Next Gen PON Coexistence Elements (CEX)

1 Select product family.

CTX = Centrix™ Cassette
 ECL = Eclipse® Module
 EG1 = EDGE™ WDM Module
 LG1 = LGX Single Width Module
 EMR = EMF/FMS Right Hand Module
 EML = EMF/FMS Left Hand Module
 RAK = 1 RU Shelf

2 Select COM connector.

B3 = LC APC 6C = SC APC
 A9 = LC UPC 3C = SC UPC

3 Select service connector.

B3 = LC APC A9 = LC UPC
 6C = SC APC 3C = SC UPC

4 Select GPON service option.

0 = None
 G = GPON 1290-1330 nm, 1480-1500 nm
 M = MultiPON: GPON+XGS-PON
 1290-1330 nm and 1480-1500 nm
 1260-1280 nm and 1575-1581 nm
 D = GPON/25G-PON 1290-1500 nm

5 Select RF Video service option.

0 = None
 R = RF Video 1550-1560 nm

6 Select XGS-PON service option.

0 = None
 X = XGS-PON 1260-1280 nm, 1575-1581 nm

7 Select NGPON2/TWDM service option.

0 = None
 W = Wide Band 1524-1544 nm, 1596-1603 nm
 R = Reduced Band 1528-1540 nm, 1596-1603 nm
 N = Narrow Band 1532-1540 nm, 1596-1603 nm

8 Select 25GS-PON option.

0 = None
 2 = 25GS-PON: UW3 1284-1288 nm;
 DW0 1356-1360 nm

9 Select 50G-PON or NGPON2 WM1 MUX service option.

0 = None
 W = 4 Channel NGPON2 MUX
 1532.68/1596.34 nm; 1533.47/1597.19 nm;
 1534.25/1598.04 nm; 1535.04/1598.89 nm
 5 = 50G-PON: UW1 1290-1310 nm;
 DW1 1340-1344 nm
 V = 50G-PON: UW0 1260-1280 nm;
 DW1 1340-1344 nm

See Note 1 on Page 5

10 Select PtP option.

0 = None
 P = PtP Shared 1603-1625 nm
 Q = PtP Expanded 1524-1625 nm

See Note 2 on Page 5

11 Select Integrated Splitter option.

0 = None
 2 = Integrated 1x2 splitter
 4 = Integrated 1x4 splitter
 See Note 3 on Page 5

12 Reserved for Serialization.

- = None

13 Select OTDR port option.

N = None
 T = OTDR 1625-1675 nm
 L = OTDR 1615-1635 nm

14 Select number of total CEXs in solution.

1 = 1	7 = 7	D = 13
2 = 2	8 = 8	E = 14
3 = 3	9 = 9	F = 15
4 = 4	A = 10	
5 = 5	B = 11	
6 = 6	C = 12	

PN Configurator Notes

Note 1 – NGPON2 MUX (WM1) OR 50G-PON. Cannot have both WM1 and 50G-PON.

The WM1 is typically built as a standalone device to multiplex the 4 channels of NGPON2 prior to other CEX devices.

When configuring a WM1, select “NONE” for other PON/TF/PtP services. An integrated splitter may be selected if desired to take advantage of higher split ratios.

For custom solutions that integrate the NGPON2 WM1s with a Coexistence Element and/or splitter, please contact Corning Engineering Services for configuration assistance.

Note 2 – Point-to-Point (PtP). Reference ITU-T G.989.2 (02/2019) table 9-1.

This recommendation specifies PtP WDM PON anywhere in the Expanded or Shared spectrum identified by G.989.2, subject to spectrum otherwise being used.

Whenever a particular subset of the spectrum in either band is unused by TWDM PON and/or legacy systems, PtP WDM PON is permitted to make use of that particular sub-band in upstream and/or downstream direction. However, the isolation requirements for the TWDM PON and/or legacy systems must be considered when determining the expanded spectrum wavelengths to be occupied by PtP WDM PON.

When TWDM PON and PtP WDM PON are both present, wavelength channels of both technologies may occupy adjacent wavelength bands; however, TWDM and PtP WDM channels must not be interleaved. The required guard band between TWDM PON and PtP WDM PON is a minimum of 3 nm when using separate mux/demux devices. In the shared spectrum case, the PtP WDM PON upstream channels use the shorter wavelengths in the shared spectrum. When a single device is used to multiplex PtP WDM PON and TWDM PON, the required guard band is a minimum of 100 GHz.

Note 3 – Integrated splitter option. An integrated splitter can be included to split the COMMON leg into multiple outputs. This is utilized as the first level split in ODNs leveraging higher split ratios, distributed split architectures or distributed tap architectures.

Configurations

The capacity for various configurations are listed for Centrix™, EDGE™, Eclipse®, and LGX solutions.

Hardware	Maximum LC Ports	Maximum Number of CEX Devices					
		2 services	3 services	4 services	5 services	6 services	NGPON2 WM1
Centrix Cassette	36	12	9	7	6	5	4
Eclipse Single Wide Module	12	4	3	2	2	1	2
LGX Single Wide Module	24	8	6	4	4	3	3
EDGE	12	4	3	2	2	1	2

Hardware	Maximum SC Ports	Maximum Number of CEX Devices					
		2 services	3 services	4 services	5 services	6 services	NGPON2 WM1
Centrix Cassette	24	8	6	4	6	3	4
Eclipse Single Wide Module	12	4	3	2	2	1	2
LGX Single Wide Module	12	4	3	2	2	1	2

Note: This option allows for multiple instances of a particular CEX in one module/cassette. The maximum number of devices allowed is dependent on the form factor of the module/cassette, the connector type chosen, and the number of services being combined.

Notes:

- 1) Maximum insertion loss includes one pair of connector loss.
- 2) Maximum insertion loss covers entire operating temperature range.
- 3) All components must be RoHS compliant.
- 4) All WDM and other fiber-based components must be compliant to their pertinent Telcordia requirements, including GR-1209, GR-1221 and others as appropriate to the specification.
